Individual Setup

Task 1:

1- Changing background color:

I changed the background color of the application from red 7 blue to white to enhance readability and provide a cleaner, more professional look. White backgrounds are widely used in modern applications, ensuring familiarity for users and better compatibility with existing UI elements.

2- Changing language to English:

I changed the buttons' language from Spanish to English improve accessibility for a broader audience and align with standard software conventions. English is widely recognized and ensures ease of use for non-native speakers.

3- Changing the width:

I updated the `<td>` width from 66% to 90% to improve the layout of the project information display. This change ensures better utilization of available screen space and enhances readability by reducing unnecessary whitespace.
